By Dr. Kelly S. Meier Update 27 July 2018 If you are interested in serving as a team member who supervises U.S. border security, becoming a Border Patrol agent may be ideal choice. The border patrol process involves a border patrol entrance examination, a review of education and experience, and screening applicants for a variety of indicators. Working as a Border Patrol agent is both rewarded and dangerous. Compensation packages generate, along with the possibility for regular promotion, are the benefits of that job. More than 20,000 people serving as Agents Patrolling Border at American Border Agents work on foot, horse, car and even on boats. Protecting U.S. borders includes patrolling the coast. Some agents work at monitor regular checks, as a first point of contact for those who want to cross the border. Others are working to discover, looking to monitor drugs, human trafficking, and other illegal activities. A Border Patrol agent never knew what the day was going to hold. Facing hazards is a regular part of the job. When a Border Patrol agent encounters a dangerous, quick situation and measured reactions. Patience, strong interpersonal skills, and an understanding of safety or law are required for this position. The ability to speak both English and Spanish is a plus. Border hiring process requires an in-depth testing process. If you are a U.S. citizen, have a valid driver's license and successfully clear a criminal background check and drug test, you will be able to move forward in the border patrol application process. Each applicant must take a Border Patrol entry exam. This examination assesses your ability to reason, speak Spanish, and understand security issues or issues of law. If you don't speak Spanish, the exam will assess your potential for learning the language. Credentials to become a core agent include a minimum of one year prior experience in enforcing law or a security-related field. If you have an undergraduate degree or graduate in enforcing law or criminal justice, you can hire at a higher-level position. In 2017, the annual salary starting for a Border Patrol agent was \$40,511. Where your assigned work, along with the potential for overtime, can increase your compensation by more than \$12,000. Accompanying payments is a federal benefits package that includes sick pay and vacation time, retirement and insurance. Regular promotions will increase your payment increases. Most Border Patrol agents start as a base level agent. Regular promotion allows agents to move through Travel and Supervised positions. The highest level is an executive position. A supervisor is responsible for recommending the incremental increase for the first five levels. Earnings increments for these levels range from between \$8,000 and \$13,000. An experienced Border Patrol agent can make more than \$80,000. A height emphasis on border security can have impact on funds and expansion of the program. There is a 7-percent growth in expected positions between now and 2026. How many architects do earn? What's the average starting salary for an architect? Can an architect touch as much as a doctor or a lawyer? Architects often supplement their income from teaching college-level courses. Some architects can even do more teaching than building things. Here are the reasons why. Many factors influence the salary cap an unpaid architect. Income varies greatly according to geographic locations, farm types, levels of education, and years of experience. While published statistics may be outdated – the May 2017 statistics from the federal government were released on March 30, 2018 – will give you a general idea of their salary, wages, income, and benefits for architects. According to May 2017 data from the U.S. Department of Labor Statistics, architects of the US earn between \$47,480 and \$134,610 a year, from a range of \$46,600 to \$129,810 the previous year. Half of all architects earned \$78,470 (\$37.72 per hour) or more – and half earn less in 2017, but these figures are significantly more than the median in 2016. The mean (average) annual salary for 2017 was \$87,500, up from \$84,470 per year in 2016, and the hourly earnings rate was \$42.07. These figures exclude landscape and naval architect, self-hire, and the owners and partners of incorporating companies. Jaden Architect by ticket too. According to statistics May 2017 from the U.S. Department of Labor, architect scenery Americans earn between \$40,480 amd \$108,470 a year, which is up to \$38,950 and \$106,770 a year in 2016. Half of all architect scenery earn \$65,760 (\$31.62 an hour) or more – and half earn less. The mean (average) annual salary of an architect scenery is \$70,880, and the mean hourly earnings rate is \$34.08, both up from the previous year. Architecture, like many other fields, is deeply affected by the local and national economy, especially the real estate market. When people don't have money to build houses, they make sure they don't have the means to hire an architect. All architect goes to good times and down times. Even the famous architects have stories to tell – Frank Lloyd Wright worked on his Usonian home design after the Great Depression; Frank Gehry experienced his own home during the economic stagnation of the 1970s; Louis Sullivan says they died without Spanish. Most architectural companies will have a combination of residential and commercial projects to hold against these economic ups and downs. According to the Outlook Occupational Manual, in 2016 the number of tasks for architects totaled 128,800. Competition is ferocious for these opportunities. The U.S. government predicts that between 2016 and 2026, the architect staff will increase only 4 percent – slower than the average growth rate of 7 percent for all occupation. Employment outlook for urban and regional planning, however, is anticipated to be 13 percent, but are far less available jobs. The Professional Organization for Architect, the American Institute of Architect (AIA), provides an AIA Compensation Survey & Awards; Calculator based on their own query. It is to benefit the organization to provide information to newly hired architects, as part of campaigns to know your Worth: Are you fairly compensated? It's well known that many entry-level architects feel to take advantage of at the beginning of their careers, and the AIA wants you to know that they are on your side with transparency information. For more work statistics, check out Deferred DesignIntelligence and Survey Benefits. This report draws data from hundreds of practices that offer design services such as architecture, design-building, engineering, interior design, landscape architecture, urban design, and industrial design. Thousands of full-time employees are represented in the survey. Design Intelligence is an independent research organization that regularly publishes surveys and reports that are sold through the bookstore online. Online communities such as Archinect also provide input data by their online members. Remember that online polling has become technologically very easy to implement, sometimes making the results a little less than scientific. The earnings architectural earnings from anonymous survey data input don't power as reliable as the federal government data collection. Too many people think of four-year colleges as training schools – a place to pick up specific, walking skills to find a job. However, the world is changing quickly and a fixed set of skills can become obsolete almost immediately. Consider your backend time as a way to lay the foundation, as if building a structure. The design of your life is based on your learning experience. The most successful students are curious. They explore new ideas and reach beyond the curriculum. Select a school that offers a strong program of architecture. But while you are an undergraduate, make sure you take classes in other disciplines – science, mathematics, businesses, and their arts. You don't need to earn an undergraduate's degree in architecture in order to become an architect. Even a degree in psychology can help you understand customers of your future. Build the critical thinking skills you'll need for an unpredictable future. If architecture remains your passion, your undergraduate science will lay a solid foundation for a graduate degree of architecture. You are the architect of your life. Architecture can open up a world of career opportunities, especially when combined with each other, you lose skills that aren't related. Maybe you'll discover a new type of housing, develop a hurricane-proof city, or design the interior rooms for a space station. The particular type of architecture you pursue could be one you never imagined... maybe one not inventory. Some of the career highest paid off today didn't exist 30 years ago. We can only guess the possibilities for the future. What the World Will Be like when you're in the peat in your career? Current trends suggest that the next 45 years will bring an urgent need for inventive, creative architects who can ride to the challenges owned by aging populations and global climate change. Green architecture, sustainable development, and universal design are becoming increasingly important. Meet those demands, and the money will follow. And speak of money ... Painters, poets, and musicians are fighting and challenges to earn enough money to put food on the table. Architect - not so much. Because architecture incorporates science, engineering, and many other disciplines, the profession opens many avenues for earning income. While other professions may pay more, an architect who is flexible and creative isn't likely to go hungry. Remember, too, this architecture is a business. Develop project management skills that will get work done over time and under budget. Also, if you can develop relationships and bring fixed business into the architectural practice, you will be invaluable and well paid. Architecture is a service, a profession, and a business. The bottom line, however, is if architecture is your passion – if you like design so much that you can't imagine spending your life any other way. If that's the case, your check size becomes less important than the next new project. Know what drives you. Architecture is a great profession, but there are some key things to remember, 9/11 architect Chris From nanboluti told a life interview at HOK. Chris gave this advice to the young architect: develop a thick skin, go with the flow, learn the profession, get into green design, not be driven by money.... A future is the most important design an architect will ever make.
